Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

Variety description

HEUSERS OSTSAAT is a well-established crimson clover variety and an outstanding precursor crop. It can be successfully used both for green manuring and in fodder mixtures. HEUSERS OSTSAAT establishes a good stand and generates high yields in the first cut. At the same time, it also produces good protein yields.

Most important characteristics

Good mass formation after sowing High yield potential in the first cut Low susceptibility to diseases

Usage

Crimson clover is mainly grown as winter catch crop for fodder. However, it is also cultivated as green manure and is therefore an important ingredient in a number of mixtures. It has low requirements in terms of soil, is sensitive to black frost and excess strain (trampling).
