

Variety Description

Variety

TITICACA

Species

Quinoa

Botanical name

Chenopodium quinoa

Seeding rate

100-200 germinable seeds/m²

Distance between rows

30-50 cm

Sowing period

April-May

Sowing depth

1-2 cm

Agronomic figures*:

Variety description

TITICACA is a variety in the medium maturity group. It is distinguished by relatively rapid early development, which contributes to its ability to form stands effectively. TITICACA grows to an average height, with limited branching and a terminal infructescence. This results in a very homogeneous stand and uniform ripening. In addition, TITICACA is very stable and demonstrates a high level of disease tolerance.

Most important characteristics

Medium maturity group
Rapid early development
Medium height
High seed yield
Yellow-light brown seed colour

Usage
