

Variety Description

Variety

DOUBLETIME

Species	Perennial ryegrass
Botanical name	Lolium perenne
Ploidy	4
Seeding rate	30 g/m ²
Distance between rows	Broadcast seeding
Sowing period	March to September
Sowing depth	Superficial

Agronomic figures*:

Persistence	8
Intensity of care required	7
Resilience	7
Sward colour	7
Leaf fineness	7
Resistance to diseases	8
Sward density (SD)	8
Suitability for recreational lawns	7
Suitability for hard-wearing lawns	8
Suitability for landscape lawns	6

Clarification of figures:

1: very early, very low / 5: medium / 9: very late, very high

Variety description

The main distinguishing feature of the tetraploid Lolium variety DOUBLETIME is its outstanding ability to establish a stand. This, along with excellent agronomical figures, places DOUBLETIME in the absolute top segment of the available lawn varieties. Its high persistence and high sward density reaffirm this fact. Other special characteristics of this variety include high drought tolerance and a rich green colouration throughout the year.

Most important characteristics

Ideal for hard-wearing and recreational lawns
Can be used universally
Extremely fine leaf and intense green colouration
High sward density
Very high persistence
