

Variety Description

Variety

BORNITO

Species	Hard fescue
Botanical name	Festuca trachyphylla
Ploidy	diploid
Seeding rate	25 g/m ²
Distance between rows	broadcast seeding
Sowing period	March to September
Sowing depth	superficial

Agronomic figures:

Ornamental lawns	(-)*
Recreational lawns (RL)	(-)*
Hard-wearing lawns	(-)*
Landscape lawns	7*
RL sward colour	7**
RL leaf fineness	8**
RL sward density (SD)	5**
RL SD within the variety	1**
RL winter appearance	4**
RL vegetation appearance	4**
Free from weeds in RL	6**
Suitability for RL	4**
Suitability for ornamental lawns	5**

Clarification of figures:

* 3: somewhat suited / 6: suited to well-suited / 9: very well-suited

** 1: very early, very low / 5: medium / 9: very late, very high

Variety description

BORNITO is a hard fescue variety with very fine, dark green-grey leaves that grows largely free of weeds. Based on these advantages, combined with slow growth and solid ground coverage, BORNITO is ideal for extensive greening projects on landscape lawns.

Most important characteristics

Good resistance to rot and red thread
Highly suitable for landscape lawns
Dark-green colour
Very fine leaf structure

Usage

Hard fescue can withstand multiple cuts without damage to the sward. The species is characterised by its attractive, fine swards. Most varieties are suitable for recreational and ornamental lawns. Dry sites allow hard fescue to show off its strengths.
