

Variety Description

Variety

TUNDRA

Species	Winter broad bean
Botanical name	Vicia faba
Seeding rate	35–50 germinable seeds/m ²
Distance between rows	as cereals
Sowing period	September–October
Sowing depth	4–6 cm

Agronomic figures*:

Tannin content	yes
Thousand grain weight	4
Maturity group	4
Plant height	5
Stability	5
Grain yield	8
Protein yield	7

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

* **Source:** Cultivator classification

Variety description

TUNDRA is a field bean variety with outstanding agronomic traits. Its high yield potential, combined with a good protein content and high yield reliability, are key benefits. In addition, the variety features medium plant height and good stability.

Most important characteristics	High grain yield Good protein content Stable Healthy
--------------------------------	---

Usage	Suitable inoculant with appropriate rhizobia: RhizoFix® RF-20
