

Variety Description

Variety

MERKUR

Species	Broad bean
Botanical name	Vicia faba
Seeding rate	35–50 germinable seeds/m ²
Distance between rows	as cereals
Sowing period	February–March
Sowing depth	4–6 cm

Agronomic figures*:

Thousand grain weight	4
Maturity group	6
Plant height	7
Stability	5
Viral infection	3
Rust	5
Grain yield	6
Protein yield	6

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

* **Source:** Cultivator classification

Variety description

With colourful blossoms, MERKUR field bean is a well-established variety that boasts balanced yield and protein levels. Its high yield security is also worth taking into consideration. Furthermore, the variety boasts impressive stability and low susceptibility to diseases.

Most important characteristics	High grain yield Good protein content Stable Healthy
--------------------------------	---

Usage	Suitable inoculant with appropriate rhizobia: RhizoFix® RF-20
