

Variety Description

Variety

VYCIAI

Species	Red clover
Botanical name	Trifolium pratense
Ploidy	2
Seeding rate	25-30 kg/ha
Distance between rows	as cereals
Sowing period	March to August
Sowing depth	1-2 cm

Agronomic figures*:

Development after sowing	5
Tendency to winterkilling	4
DM-yield total	5
DM-yield first cut	5
DM-yield in aftermath	5
Total DM-yield in second main production year	5
Shortage after second winter	5
Persistence	6
Crude protein content	5
Beginning of flowering	4
Susceptibility to sclerotinia trifoliorum (clover rot)	5
Susceptibility to southern anthracnose (stem canker)	5
Susceptibility to mildew	5
Tendency to lodging	4

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

* **Source:** Cultivator classification

Variety description

VYCIAI is a diploid variety for multi-year fodder cultivation. It was bred in Lithuania and possesses remarkable winter hardiness and persistence. It produces high-quality staple feed in mixtures with grasses such as meadow fescue or Italian ryegrass. VYCIAI is persistent and can therefore be cropped for two to three years.

Most important characteristics

High-yielding and winter hardy
Healthy
Persistent
High protein content

Usage

Also available as **coated seed** [Mantelsaat®].

Suitable inoculant with appropriate rhizobia:
RhizoFix® RF-45
